Managing Director, Yamuna Homes and
Designs Pvt. Ltd.

Message

At Yamuna Homes and Designs Pvt. Ltd., we are committed to delivering innovative designs and construction solutions that blend modern aesthetics with functionality. Our mission is to transform the way people live by offering homes that are not just buildings, but spaces that inspire. We envision a future where every person can enjoy the benefits of luxury living and sustainable, eco-friendly developments.

About

Yamuna Homes and Designs evolved from a small entity into a major player in the construction industry over the past two decades. We began with Yamuna Drilling Enterprises and Yamuna Earth Movers, and today, we are a trusted name in real estate, civil construction, and residential developments across India, especially in Karnataka. Our focus is to provide state-of-the-art living spaces and quality commercial developments that elevate the standards of urban life. Our signature projects, such as Yamuna Asha City and Yamuna Sky City, define the future of luxurious and sustainable living.

Yamuna Sky City

Yamuna Asha City

"Introducing Yamuna Asha City by Yamuna Homes & Design Pvt. Ltd., an exclusive residential development offering premium plots ranging from 5 to 10 cents, nestled within a sprawling 45-acre habitat in Kulai, Mangalore. Set amidst the historic coastal charm of Mangalore, this visionary project stands as a testament to exceptional community living.

In contrast to the prevalent high-rise developments, Yamuna Asha City presents a refreshing paradigm, situated a mere 150 meters from the Arabian Sea. Our endeavor is to curate a contemporary lifestyle enriched with modern amenities, all within a secure and tranquil environment. Immerse yourself in lush gardens and captivating water features, meticulously designed to foster serenity and well-being among residents.

Every aspect of the layout and architecture has been meticulously crafted, ensuring not only proximity to the sea but also incorporating additional recreational facilities. Moreover, the strategic location offers convenient access to reputed educational institutions, colleges, and thriving business establishments, making Yamuna Asha City the epitome of holistic and balanced living.

Specifications

General Specifications:

- The building boasts a fully framed RCC structure having 2m thick M50 grade raft foundation resting on 500 plus piles of 1m dia penetrated to the hard rock. Superstructure with RCC walls of M50 to M80 grade self-compacting special concrete with top quality primary steel of FE550D used. With external walls constructed using Mivan aluminum formwork and concrete solid block masonry for partition walls.
- Internal walls and ceilings are meticulously finished with single-coat smooth finish cement plaster (coarse putty, fine putty, primer, premium emulsion paint) while external walls are adorned with exterior-grade emulsion painting.
- An RCC overhead tank is installed above the terrace, along with an underground (UG) sump tank for water storage.
- The service floor, situated at the 33rd level, accommodates flushing and treated water tanks to ensure efficient water distribution throughout the building.
- In compliance with fire safety regulations, a 1 lakh capacity RCC Fire Overhead Tank (OHT) with a pump room is located at the 51st floor, alongside refuge areas strategically positioned at the 19th, 29th, 38th, 47th, and 56th floors.
- An underground RCC Sewage Treatment Plant (STP) water tank is incorporated to manage wastewater effectively.
- Separate fire water tanks are installed for firefighting purposes and storage of treated water from the STP, situated at the terrace level.
- Premium quality Kajaria/Simpolo/RAK/Somany or equivalent vitrified GVT/PGVT tiles adorn the main flooring inside the flats, ensuring durability and elegance.
- Glazed tiles of superior quality embellish the walls of the toilets, complemented by anti-skid tiles for enhanced safety and practicality in wet areas.
- Main doors are crafted with wooden frames and veneers fitted flush door shutters.
- Main doors are equipped with premium quality fittings and branded door locks, ensuring security and reliability.
- Bedroom doors feature wooden door frames with laminate finish flush doors, complemented by premium quality ironmongery for added durability and style.
- Toilets are furnished with granite frames and fibrotech door shutters, complete with premium quality fittings for a sleek and functional design.
- Aluminium system windows with performance glass specially designed for the sea condition and wind load, anodized/powder coated aluminum glazed windows with safety grills are installed throughout the building, with provisions for mosquito mesh for added comfort.
- Aluminium system french windows with performance glass specially designed for the sea condition and wind load, balconies are adorned with anodized/powder coated aluminum glazed French doors, offering a seamless transition between indoor and outdoor spaces, with provisions for mosquito mesh.
- Toilets are equipped with anodized/powder coated aluminum glazed ventilators, featuring provisions for fitting exhaust fans to ensure proper ventilation and air circulation
- A society room, BMS/CCTV room is situated on the ground floor for community gatherings and security management.
- Surrounding the ground floor are shaded and semi-shaded sitting areas, nestled amidst landscaped gardens and water bodies, catering to all age groups.
- Drivers' and servants' accommodations, complete with attached toilets, pantries, and common dining areas, are located on the first and second floors, with separate restroom facilities for gentlemen and ladies.
- On the third floor, residents can enjoy an infinity swimming pool alongside a kids' pool and a multipurpose court, providing ample recreational opportunities.
- The third floor also houses a centrally air-conditioned clubhouse, featuring a fully equipped gymnasium, kids' activity/indoor games area, meditation/yoga room, home theatre, table tennis, billiards room, and dedicated restrooms, steam baths, and Jacuzzis for both gentlemen and ladies.
- A landscaped green area spanning 18,795 square feet enhances the ambiance of the third floor, offering residents a serene outdoor retreat.
- EV charging points are provided in the car parking area to support environmentally friendly transportation options.
- Common areas and staircases feature granite or tile flooring, while safety railings ensure security on balconies and staircases.
- VDF concrete flooring or premium quality concrete interlock paving blocks adorn the parking area and yards, combining durability with aesthetic appeal.
- Premium quality anti-skid vitrified tiles grace the terrace floor, providing safety and elegance to the outdoor space.
- The property features modular electrical switches, alongside premium quality wires and DB fittings, ensuring efficiency and safety in electrical systems.
- Enjoy premium quality plumbing and sanitary fittings in the toilets and dining areas, combining functionality with aesthetic appeal.
- High-quality electrical fittings adorn the balconies, common areas, facilities, car parking areas, yards, compound walls, and gates, enhancing both functionality and visual appeal throughout the property.

Building Finishes:

- Premium interior emulsion paint or texture paint is applied over putty-finished internal walls and ceilings, ensuring a smooth and elegant finish throughout the living spaces.
- Exterior grade emulsion painting is utilized for the external walls, providing durable protection and a polished appearance.
- Main door frames and shutters are treated with a lustrous melamine polish, adding a touch of sophistication and enhancing their longevity.
- Internal door frames are also finished with a melamine polish, maintaining consistency in appearance and quality throughout the property.
- All metal surfaces are meticulously coated with metal primer and painted with enamel grade color, safeguarding against corrosion and ensuring a pristine finish.

Electrical Specifications:

- The power allotment for a 2 BHK flat is set at 6 kW, while for a 3 BHK flat it is allocated at 8 kW. In the case of a 4 BHK flat, the power allotment increases to 10 kW, and for a 5 BHK flat, it is 12 kW.
- Premium quality PVC insulated cables, along with DB accessories and modular switches, are used throughout the property, ensuring reliability and safety in electrical systems.

Plumbing Specifications:

- Premium quality branded plumbing pipes and fittings are utilized for the pressure-tested pipelines of both water supply and drainage networks, ensuring durability and reliability.
- The property features a gravity-flow type water supply system, promoting efficient water distribution throughout the premises.
- A separate pipeline network is dedicated to carrying STP treated water for WC flushes, supporting sustainable water management practices.
- Solar water provisions are integrated into the master bedroom toilets, offering eco-friendly and energy-efficient hot water solutions.

Living Room Specifications:

- Ample provision of light and fan points is ensured throughout the living room.
- It is equipped with a TV point integrated with DTH/Cable connectivity.
- Telephone connections are available in every apartment.
- Each unit features a multi-video door phone point.

Bedroom Specifications:

- Sufficient provision of lighting and fan points is incorporated in all bedrooms.
- Each room is equipped with a dedicated TV point integrated with DTH/Cable connectivity.
- Telephone connections are readily available in Master bedroom.
- Each bedroom is equipped with one AC point

Bathroom Specifications:

- Adequate light points are installed and each light point is accompanied by a 5-amp switch and socket.
- Electrical provisions are made for geysers and exhaust fans in all areas, enhancing functionality and ventilation.
- The RCC base slab in all bathrooms is treated for waterproofing, ensuring durability and protection against moisture.
- Ceiling-suspended pipelines with grid false ceilings are installed in toilets, optimizing space and aesthetics.
- Plumbing and drainage lines are pressure checked to ensure proper functionality.
- Concealed flush valves are installed for EWC flushes, ensuring efficient water flow and waste management.
- Single-lever diverter shower units are provided in all bathrooms, offering convenient and customizable shower experiences.
- Premium quality Jaguar/Kohler wash basins and wall-mounted EWCs are installed in the toilets, adding a touch of elegance and functionality.
- Premium quality Jaguar/Kohler plumbing fittings and health faucets are included in all toilets, ensuring durability and superior performance.
- Water line provisions for geysers are available in all toilets, enhancing comfort and convenience for residents.
- Solar water provisions for Master bedroom toilets.

Kitchen Specifications:

- Water line provisions are installed in all kitchens to accommodate instant geysers and water purifiers
- Water line provisions are made in the work area for the installation of washing machines and dishwashers
- Each kitchen is equipped with a sink mixer tap, nozzle taps, and necessary angle valves.
- Sufficient lighting and fan points are strategically placed throughout the property.
- Adequate power points are provided for the installation of chimney and exhaust fans.
- Electrical provisions are made near the sink for the installation of water purifiers.
- Electrical provisions are also included for instant geysers
- Additionally, provisions are made in the work area for the installation of washing machines and dishwashers

Wind Tunnel Test

3.1 Applicability

Base moments and shears applicable to the design of the structural system for the building were determined using the High-frequency Balance (HFB) technique. In this approach the overall aerodynamic loads are measured in the form of base moments on an instrumented rigid model.

The wind tunnel test model was designed and fabricated using the AutoCAD drawings provided by Archi-Technics on 2 October 2024. The results of the study may require review if significant changes to the external building geometry take place or are foreseen.

The proximity model was designed and fabricated based on information obtained from Google Earth and other sources. While every effort has been made to ensure surrounding buildings are represented accurately at the time of testing, CPP should be contacted if any concerns are held in this regard, particularly in areas where construction development is undergoing or subject to change.

3.2 Test And Proximity Model

A model of the proposed development and surrounds to a radius of 500 m was constructed at a scale of 1:350, which is consistent with the modelled atmospheric flow, permitted a reasonable test model size with an adequate portion of the adjoining environment to be included in a proximity model and was within wind tunnel blockage limitations. Significant variations in the building surface were formed into the model. The extent of surrounds modelled is shown in Figure 1.

The model was mounted on the turntable, located near the downstream end of the wind tunnel test section, allowing rotation of the modelled area for examination of wind loads from any approach wind direction. The model installed in the wind tunnel is shown in Figure 1.

3.3 Approach Flow

Directional and elevation-wise variations in velocity and turbulence at the project site develop due to upwind changes in surface roughness. The resulting approach flow profiles are calculated using an approach based on ESDU (2006) that accounts for these surface roughness variations. The profiles are replicated in the boundary layer wind tunnel described in Appendix A.

Velocity profile measurements were taken to verify that appropriate boundary layer flow approaching the site was established in the wind tunnel. The profile of longitudinal turbulence intensity in the flow approaching the study area is also modelled and is matched to the approach conditions at the site.

Highlights

- The development boasts a soaring 60-story tower housing 299 meticulously crafted flats, complemented by an elevated podium featuring three levels of parking.
- A grandiose triple-height entrance lobby and welcoming visitors lounge set the tone for an elevated living experience.
- The building is facilitated by six high-speed automatic lifts, each accommodating 20 passengers, alongside two 24-passenger service lifts (Mitsubishi or equivalent).
- Strict adherence to Fire Service Department specifications ensures fire fighting systems throughout the premises.
- Uninterrupted power supply is guaranteed via a 100% backup system, featuring an acoustically enclosed generator for seamless operations.
- Enhanced security measures, including electronic surveillance cameras and round-the-clock personnel, ensure the safety of residents.
- Multi-video door phone connectivity offers direct communication between security personnel and individual apartments, enhancing convenience and security.
- Sustainable water management solutions, such as rainwater harvesting and borewell facilities supplemented by corporation water, underscore the project's commitment to environmental stewardship.
- The installation of a Water Treatment Plant (WTP) and Sewerage Treatment Plant (STP) ensures the availability of clean water for domestic use and the responsible treatment of wastewater
- Advanced waste management technologies, including Bio Organic Waste Convertor (OWC) equipment, contribute to the project's eco-friendly ethos.

- Residents enjoy a plethora of recreational amenities, including a Ground floor leisure zone featuring a jogging track, skating rink, and cricket pitch, as well as a dedicated children's play area.
- Ample visitors parking facilities are conveniently situated on the ground floor, facilitating hassle-free guest access.
- Common facilities on the ground floor include a society room, as well as dedicated rooms for Building Management System (BMS) and CCTV operations.
- Tranquil shaded seating areas, thoughtfully integrated amidst lush landscaped gardens and water features on the ground floor, offer residents of all ages a serene retreat.
- The first and second floors cater to the needs of support staff, with dedicated drivers/servants rooms featuring attached facilities, alongside common dining areas and separate toilet blocks for both genders.
- The third floor hosts an opulent infinity swimming pool, a separate kids' pool, and a versatile multipurpose court, adding a touch of luxury to the residents' leisure pursuits.
- Host events in style at our 3rd-floor banquet hall, complete with separate restrooms.
- Dive into luxury at our 61st-floor infinity pool with stunning panoramic views.
- Go green with solar panels on the terrace, adding eco-friendly charm to our property .
- Get a unique view from our viewing gallery at the LMR bottom level
